Roadmap F1-F6

Do Requisito a Entrega

Projeto: CRM B2B Algar Telecom / Ever i9 DevOps

Data: 09/08/2026

Autor: Claude (Arquiteto do Projeto)

Versao: 1.0

Confidencial - Uso Interno

Resumo da Implementacao

Fase	Componente	Endpoints	Status
F1	Setup Scan (Raio-X)	8 scopes, rota dinamica	Implementado
F2	Cross-Org Diff	5 comparators	Implementado
F3	Agent Builder	6 endpoints	Implementado
F4	Spec Context	3 endpoints	Implementado
F5	Pipeline Tracker	4 endpoints	Implementado
F6	Revenue Cloud	2 endpoints	Implementado

F1 - Raio-X Completo (setup-scan)

Endpoint: GET /api/orgs/:id/setup-scan/:scope

8 scopes: security (114 PS, 64 Profiles, OWD, FLS), automation (59 Flows, 8 Triggers, 29 Jobs), objects (20 custom, 105 RTs, 998 Layouts), integration (16 NCs, 13 Auth Providers, 7 Connected Apps), users (46 profiles, 40 frozen, 15 licenses), data (volume 8 objetos), experience (7 networks, 78 nav items), agentforce (10 agents, 46 invocable flows).

Impacto: Heroku only. Leitura pura nas orgs.

F2 - Cross-Org Diff

Endpoint: GET /api/orgs/compare?source=36■=100&scope;=all

5 comparators: objects (custom objects, campos por objeto, record types), security (PS, PSG, OWD), automation (flows, VRs, triggers), integration (NCs, auth providers, connected apps), agentforce (agents, actions, topics, plugins).

Retorna: match, diverge, onlySource, onlyTarget para cada item.

F3 - Agent Builder

6 endpoints: check-standard (lista standard vs custom actions), scan/:agentName (raio-x completo do agent), create-actions (Flows + GenAiFunction), create-topic (GenAiPlugin com instructions), link-topic (vincula plugin a planner), remove-action (desvincula sem deletar).

Write endpoints com enforcement read_only (403 em orgs protegidas).

F4 - Spec Context

3 endpoints: spec-context/:object (campos custom, RTs, VRs, Flows, Triggers, Layouts, FLS, OWD, volume), spec-context?objects=Lead,Account (multi-objeto), spec-context/gap (gap analysis EXISTE vs CRIAR).

Alimenta /spec e /hf com dados reais marcados [VERIFICADO] ou [NOVO].

F5 - Pipeline Tracker

4 endpoints: start (cria pipeline full/spec-only), status (progresso), advance (avanca step), list (lista pipelines). 8 passos: Captura, Scan, Gap, Spec, Deploy, QA, Docs, GitHub.

Postgres: tabelas pipelines + pipeline_steps.

F6 - Revenue Cloud

2 endpoints: scan (25 queries SOQL nos objetos RLM), deploy-catalog (batch insert com dependencias: Catalog, Category, Product, Attribute, PricebookEntry).

Agentforce - Algar Partner AI

Implementacao completa do agent Partner AI no arqevery e HOMOL.

Componente	arqevery	HOMOL
Flows (invocaveis)	4 (incl. Create)	3 (sem Create)
GenAiFunction (actions)	4	3
GenAiPlugin (topic)	1 - Partner_Lead_Operations	1 - Partner_Lead_Operations
GenAiPlanner	Partner_Lead_Agent	Algar_Partner_AI_v3
BotVersion	v1 (via Sales_Support_Agent)	v3 (pendente ativar)
EmbeddedServiceConfig	Pendente criar	Algar_Partner_AI_Web (ok)

Pendencia HOMOL: ativar BotVersion v3 via Setup > Agents > Algar Partner AI > v3 > Activate.

Infraestrutura

Toda implementacao F1-F6 e 100% Heroku (i9-mcp). Arquivos novos no repo GitHub albertobneto-ai/i9-mcp:

Arquivo	Linhas	Fase
src/routes/setup-scan.js	410	F1
src/routes/org-compare.js	293	F2
src/routes/agent-builder.js	376	F3
src/routes/spec-context.js	256	F4
src/routes/pipeline.js	231	F5
src/routes/revenue-cloud.js	214	F6

Total: 1.780 linhas de codigo novo. Zero impacto em orgs na implementacao.
